Technical data

Sheet width, max Sheet thickness Adjustable speed Straightening rollers Draw-in rollers Strip cutter

Cross-cutter shear angle Repeatability accuracy of the slitter (with motorized uncoiler reel) Max longitudinal feed Electric power Setting gauge for strip blades Active lubrication system Tools Instruction books Working height Dimensions: L/W/H 1250 mm 0,5 - 1,25 mm 25 m / min 3 pcs Rubber-coated 3 cutting blade-pairs 2 cutting edges 1,2°

± 0,5 1 km 5kW / 16 A

970 mm 1900 mm/1800 mm/ 1250 mm - Split cutter blades are easy to adjust transversally. The change and the addition of a blade is fast.

- A side stop eases the sheet width setting, which can be read with an accuracy of 1 mm.

- The electric power center is located on the side of the machine, where it is easy to maintain. The control buttons for machine, safety switches and an electronic control unit with a display are fitted on top of the center.

- The supporting rolls as well as the side guide rolls and the holding rolls are equipped with ball bearings.

- Manually operated wheels and levers are ergonomically designed and all setting gauges are easily readable.

- The covers of the machine may be opened and they are equipped with safety limit switches.

Options

• Straightening rollers 4 pcs • Electronic display • Strip width settings for the installation • Extra slitter blades • Pneumatically operated straightening rollers • Perforation unit. • Sickning unit • Electronically controlled uncoiler reel
